PROJECTS

Restaurant Management System (01/2023 - 02/2023)

- Restaurant Management System – customer can Sign in/Sign Up into the account, select product using checkbox option, add it into the cart and make place order. Admin can login into the account separately, view Menu list, make changes in menu item like Edit, delete and add new items. These informations are stored in database (MySQL) using JDBC connection.

Facebook Cloning (02/2023 - 03/2023)

- Facebook cloning (Friendzee) – user can log in/log out into the account, can able to upload the images and videos. User can see the users who are active as online and who are all inactive as offline. User can delete the post before posting it in the post. Icons for Like, Comment and Share is implemented using the TailwindCSS. Back end has springBoot and MySQL is connected using JDBC connection.

E-commerce website for online shopping (11/2022 - 11/2022)

- E-commerce website is created for online shopping using the class name as User, Customer, Admin, Product, Seller, Store, Order, Cart, Catalog. User can order the clothes under the catalog with sub-category and can checkout the order details. Admin can view the order, product and seller details. Seller can view the order details and list of products.

RBI Banking (11/2022 - 11/2022)

- RBI Banking is done using OOPs concepts (Encapsulation, Abstraction, Polymorphism and Inheritance) and also interface concepts applied as interface Account. SBI, HDFC, ICICI extends from Parent Class Bank. OpenAccount extends from Main class RBI. One can deposit, withdraw the amount, can able to the balance in the account, billing generation concepts are used
